Geoffrey Mwangi

Software Engineering Portfolio & Technical Track Record

Nairobi, Kenya • jeff@app.moonlist.app • github.com/yenmulla • t.me/moon_jeff

OVERVIEW

This portfolio highlights professional system architecture, cross-platform applications, smart contract protocols, and scalable mobile and web engineering delivered across diverse industry ventures from 2022 to the present.

MAJOR TECHNICAL VENTURES & CONTRIBUTIONS

Moonlist Ecosystem

Founder & Architect — 2026 – Present

Engineering an AI-driven multi-chain cryptocurrency aggregator, portfolio analytics dashboard, and non-custodial execution ecosystem available seamlessly across web and mobile.

- Cross-platform application structure supporting real-time market data tracking.
- Robust multi-chain wallet integration and transaction execution pipelines.

Pretium Finance

Web3 Engineer — 2025 – 2026

Developed decentralized finance yield interfaces and structured smart contract integration layers for capital efficiency and lending protocols.

Solerium & GOATS Miniapp

Full-Stack Engineer — 2024 – 2025

Designed high-engagement interactive miniapps and user-facing modules optimized for performance, scalability, and seamless community onboarding.

PREVIOUS ENGINEERING WORK & PROTOCOLS

Hashbit Org — Lead Smart Contract Developer — 2022 – 2024

Spearheaded smart contract development, protocol logic optimization, and security architecture across EVM-compatible networks.

- Implemented complex custom fee routing and liquidity management mechanics.
- Conducted rigorous contract optimization and testing cycles.

Docswap Exchange — Smart Contract & Frontend — 2024

Contributed to decentralized exchange infrastructure, optimizing token swap execution pathways and liquidity provider analytical dashboards.

Cross-Platform Mobile Clients — Flutter & Dart — Ongoing

Engineered production-ready mobile applications featuring responsive layouts, smooth state management, secure local data caching, and seamless API integrations.

CORE COMPETENCIES & TECHNICAL CAPABILITIES

Frontend & Mobile
Flutter, Dart, React, TypeScript, Tailwind CSS, Vite, Responsive Design.

Smart Contracts
Solidity, EVM Networks, Remix IDE, Tokenomics, Fee Routing Architecture.

Backend & APIs
Firebase, Node.js, Cloudflare Edge Workers, REST & GraphQL integration.

DevOps & Tooling
Git, GitHub Actions, CI/CD Pipelines, Multi-Chain RPC Node Management.
